ABOUT ME

Second-year B.Tech Computer Science student specializing in Artificial Intelligence and Machine Learning at SRM Institute of Science and Technology. Passionate about leveraging AI/ML to address real-world challenges. Experienced in developing projects ranging from predictive analytics to computer vision applications. Seeking AI/ML or research internships to further enhance technical skills and contribute to innovative solutions.

EDUCATION

2023 - 2027

SRM INSTITUTE OF SCIENCE
AND TECHNOLOGY

B.tech in Computer Science and Engineering with specialization in AI/ML

- Data Structures and Algorithms
- Computer Vision
- Operating Systems
- Database Management Systems (DBMS)
- Computer Networks
- Object-Oriented Programming (C++)
- Artificial Intelligence
- Machine Learning
- Deep Learning
- Mathematics for Computing (Linear Algebra, Probability, Statistics)

EXPERIENCE

JUN 2024 - JUL 2024

EXTION INFOTECH

Artificial Intelligence and Machine Learning Intern

Technical Skills & Projects

- Developed Chatbots, Sentiment Analysis Tools, and a Diabetes Prediction System using machine learning techniques.
- Gained hands-on experience with core AI/ML concepts including Convolutional Neural Networks (CNNs), Artificial Neural Networks (ANNs), and Support Vector Machines (SVMs).

Leadership & Teamwork

- Acquired essential leadership skills by leading project teams and coordinating tasks effectively.
- Experienced in team collaboration, ensuring smooth communication, task distribution, and achieving common goals within deadlines.

SOFT SKILLS & TECHNICAL SKILLS

- Teamwork
- Collaboration
- Frameworks & Libraries: TensorFlow, scikit-learn, OpenCV, NLTK
- Tools & Platforms: Git, GitHub, Node.js, Stable Diffusion
- Problem Solving
- Concepts: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision,
- Programming Languages : Python, JavaScript, HTML, CSS , C++ , C

PROJECTS

SECURE PAYMENTS

Blockchain-Based Payment System

Designed and developed a secure digital payment gateway that integrates blockchain for transaction integrity and AI for fraud detection. Leveraged smart contract logic to ensure transparency and trust while using machine learning models to detect anomalies in payment patterns.

Technologies: Python, Flask, Blockchain, Smart Contracts, Scikit-learn, HTML/CSS

Highlights:

- Trained a fraud detection model with >90% accuracy using transaction metadata.
- Implemented modular REST APIs to handle secure payment workflows.

Github repo :- <https://github.com/abhinav-123457/Secure-Payments>

DIABETES PREDICTION SYSTEM

Medical Diagnosis Assistant using ML

Built a predictive analytics model to assess diabetes risk based on user-inputted medical parameters. Implemented a user-friendly interface for real-time health assessments and used feature scaling and model tuning for improved precision.

Technologies: Python, Scikit-learn, Pandas, Streamlit

Highlights:

- Achieved high classification accuracy using Logistic Regression and SVM.
- Enabled instant predictions with clear explanations for each input factor.

Github repo :- <https://github.com/abhinav-123457/Diabetes-Prediction-System>

FRUIT AND VEGETABLE RECOGNITION MODEL (FLIPKART GRID 6.0)

Deep Learning Image Classification System

Engineered a CNN-based model capable of identifying a wide range of fruits and vegetables with high accuracy from image inputs. Contributed as part of a competitive challenge hosted by Flipkart Grid 6.0.

Technologies: Python, TensorFlow, OpenCV, Keras

Highlights:

- Preprocessed a custom dataset of 15+ classes for optimal model performance.
- Achieved over 92% validation accuracy using image augmentation and fine-tuned hyperparameters.

Github Repo :- <https://github.com/abhinav-123457/Fruit-and-Vegetable-Recognition-Model>

INTERSHIP PROJECTS

CYPHER

AI Chatbot

Developed an AI-powered chatbot capable of handling custom natural language queries, integrating pre-trained NLP models with custom response pipelines.

Technologies: JavaScript, Node.js, Dialogflow

Highlights:

- Implemented intent classification and response mapping with dynamic user input parsing.

Github Repo :- <https://github.com/abhinav-123457/CYPHER>

STABLE DIFFUSION IMAGE GENERATOR

Generative AI Tool for Artistic Visuals

Built a Python-based tool to generate creative visuals using the Stable Diffusion model. Enabled user input prompts to synthesize artistic images via latent diffusion.

Technologies: Python, Diffusers Library, Hugging Face, Transformers

Highlights:

- Deployed the model locally with optimized GPU support for fast image generation.

Github Repo :- <https://github.com/abhinav-123457/stable-diffusion-image-generator>

SENTIMENT ANALYSIS TOOL

Real-Time Text Emotion Classifier

Created a sentiment classifier to analyze social media or textual content and determine the emotional tone. Integrated word tokenization and sentiment scoring for clear visualization.

Technologies: Python, NLTK, Pandas, Streamlit

Highlights:

- Fine-tuned text preprocessing and polarity mapping for accuracy improvement.

Github Repo :- <https://github.com/abhinav-123457/Sentiment-Analysis-Tool>

CERTIFICATIONS

- **Supervised Machine Learning: Regression and Classification (Cousera)**
- **Career Essentials in GEN AI (LinkedIn Learn & Microsoft)**
- **Introduction to image processing(Cousera)**
- **Prompt Design in Vertex AI(Google Cloud Skills Boost)**
- **GEN AI NANO DEGREE**
